

Angad Singh Arora

Redmond, WA | angadsingharora@gmail.com | 425-229-0228 | linkedin.com/in/angadsingharora1

EDUCATION

University of Washington, Seattle

Graduation: June 2028

B.S. in Computer Science, Minor in Entrepreneurship

Relevant Coursework: Data Structures & Algorithms, Computer Programming II, Software Design & Implementation, Linear Algebra, Multivariable Calculus, Statistics & Probability, Entrepreneurship & Innovation

PROFESSIONAL EXPERIENCE

Dosu

San Francisco, CA

Software Engineering Intern

June 2026 – Present

- Built a marketing/GTM operations agent that automated multi-step account research, reduced manual analysis time by ~40%, and identified high-intent leads with ~85% precision
- Analyzed Pydantic Logfire traces across 20+ production agents to identify failure patterns, redundant tool calls, and performance bottlenecks
- Optimized agent orchestration and model interactions, reducing end-to-end latency by 100 ms across key workflows
- Improved RAG pipelines for retrieving company-specific context from Dosu's knowledge infrastructure

Cue

Seattle, WA

AI Engineer

January 2026 – April 2026

- Architected smart-glasses system using OpenCV, Whisper, and FastAPI to deliver real-time communication coaching from synchronized audio and video streams
- Built multimodal inference pipelines processing video at 60 FPS with sub-250 ms visual latency, detecting pacing, filler words, pauses, talking-point coverage, and audience disengagement
- Developed a timestamp-aligned analytics engine that fused speech and vision signals into live coaching prompts and post-session reports across 6+ communication metrics

Safely Campaign (Congressional App Foundation)

Renton, WA

Software Developer

March 2024 – July 2024

- Led a team of four engineers to develop a geofencing-based mobile app that used Apple AirTags and GPS telemetry to monitor campaign sign placement within a 50-foot radius
- Integrated traffic-flow analytics and a visibility optimization algorithm to identify high-exposure zones, increasing average sign impressions by 67% across major intersections
- Deployed a live prototype that detected two instances of sign theft and presented findings to Washington State Senator Manka Dhingra, demonstrating data-driven approaches to campaign infrastructure management

PROJECTS

GrandFLOW (UC Berkeley Hackathon)

November 2025

- Built a senior care platform using Next.js, TypeScript, and Supabase, integrating voice agents and health dashboards
- Implemented real-time voice interaction with Whisper STT and Fish Audio TTS while syncing 10+ wellness metrics
- Integrated LLM agents trained on 3,000+ patient-state examples to detect anomalies and generate personalized care recommendations

Gurbanity: Web Application

Seattle, WA

Founder and Lead Developer

January 2022 – June 2025

- Built an AI-powered Punjabi learning platform serving 1,200+ users across language, music, and heritage modules
- Developed adaptive learning features that used engagement data to personalize vocabulary, scripture, and pronunciation lessons
- Created a transliteration engine and analytics dashboard, improving translation accuracy by 68%

Computational Energy Systems Lab

Durham, NC

Lead Researcher and Materials Data Analyst

February 2024 – September 2024

- Modeled aluminum-ion batteries using Density Functional Theory and Molecular Dynamics, achieving higher predicted voltage and energy density than lithium-ion benchmarks
- Automated Python and VASP simulation workflows, reducing computation time by 40% while screening sustainable cathode materials

SKILLS

Languages: Python, Java, JavaScript, SQL, C++, HTML/CSS, TypeScript

Frameworks/DBs: React, Svelte, Next.js, Node.js, Firebase, Supabase, REST APIs, PostgreSQL, MongoDB

Tools: Git/GitHub, Kubernetes, Docker, Redis, Vercel, CI/CD, AWS, Azure DevOps, Pydantic AI, GCP, JUnit, Vite, Postman
